

Microsoft Solutions for Heavy Equipment

KPMG's technology solution for the Automotive, Equipment, Rental and Fleet industries, is an end to end business application created within Microsoft Dynamics 365.

Industry specific needs across the entire value chain are integrated with core finance, supply chain, and human resource capabilities in a modern business application with rich analytics and a market leading cloud ecosystem.

Industry specific capabilities on a familiar Microsoft platform

Equipment management

Organise replacements and upgrades, and pre-delivery inspections. Manage whole of life costing and profitability.

Work order management

Manage services jobs and maintenance plans including operation lists with tasks and times. Empower staff with workshop and resource scheduling capabilities.

Rental management

Sweat the details with pricing based on usage, wear or time. Enable short and long term contracts with once off or periodic invoicing. Gain visibility into rental fleet availability.

Single view of the customer

Gain a holistic view of your customers with details such as parts and labour pricing, parts and workshop management, returns, and direct delivery orders.

Parts and refurbishment

Handle your supplier and non-stock items, and refurbished parts. Calculate safety stock automatically, and manage emergency and direct delivery orders, and returns.

Mobility

Operate your Heavy Equipment organisation on the move with mobile sales and warehousing. Gain full access to device and parts sales, and stock visibility. Access your customer preferences and order history.

Built on Microsoft Dynamics 365 and Annata IDMS
