Achieving trustworthy AI

November 2020

A model to design, manage and use trustworthy AI systems to enable the long-term value of AI to be realised and captured.

An AI system refers to all components and lifecycle stages of a data driven solution including design, data, algorithms and processes. The development, procurement, deployment and governance of trustworthy AI systems requires a connected, firm wide approach that aligns, integrates and connects key functional areas of the organisation. The six segments of the model represent soft, permeable boundaries.
