Dear Sir/Madam,

We present to you the fifth edition of our Software Licensing Bulletin, which highlights prominent features of Flexera FlexNet Manager®.

**Flexera FlexNet Manager**

- FlexNet Manager Suite is available through three delivery models:
  1. On-premises
  2. Cloud (Software as a Service (SaaS) solution)
  3. Managed service.

- It is a scalable IBM® license compliance and software license enhancement solution that is built on the FlexNet Manager Platform. The product automates and helps enhance entitlement based software license management to enable the reduction of license, maintenance and audit costs for IBM server software, while maintaining license compliance.

- The FlexNet normalised inventory products provide:
  - Baseline tracking of devices: Identify changes of each device over time; devices missing or changed are flagged. (Supports IMAC processes—installs, moves, adds and changes)
  - Easy integration with service desk and other tools through web services. This is particularly important to keep the repository up to date during IMAC processes
  - Data to update the fixed asset register (FAR) to help ensure accurate property tax payments and other financial management processes.

We hope the bulletin was informative. We would be happy to arrange for any additional information that you may require on the subject. Please write to us at in-fmkpmgccsbulletin@kpmg.com, for any queries or feedback.

Regards,
KPMG in India

About KPMG in India’s software licensing team. We have an experienced team of over 160 professionals in India with diverse and in depth knowledge of software license, software asset management tool, Intellectual Property (IP) and contract review.
