Dear Sir / Madam,

We present to you the twenty first edition of our Software Licensing Bulletin, which highlights information on Symantec™ Netbackup ™.

- NetBackup uses a common licence system same as the other Veritas® products. However, that the common licence system provides flexibility in the licence features that each product implements. For example, NetBackup does not have a node-locked licence system, but some other products do.
- The media/doc kit by itself does not allow any access to NetBackup. You always need a licence key (either permanent or evaluation). Licence keys should always be delivered with the media/doc kit, so you should never find yourself with a mediadoc kit and no key.
- Information about licence keys is stored on the master server. To access the information, open the NetBackup Administration Console and select Help > Licence Keys.
  - On media servers, enter the master server name as the host name on the login screen.
  - On UNIX servers, you can also run the following command: /usr/openv/netbackup/bin/admincmd/get_licence_key
- When you install NetBackup, you are prompted to enter the licence keys for all options and agents. If you purchase an agent or other add-on product at a later date, you can enter its licence key manually. Open the NetBackup Administration Console and select Help > Licence Keys.
  - On media servers, enter the master server name as the host name on the login screen.
  - On UNIX servers, you can also run the following command: /usr/openv/netbackup/bin/admincmd/get_licence_key
- Many options and agents require that you have your original NetBackup DVDs, because additional binaries must be installed. You should always keep your NetBackup DVDs in a safe place.

We hope the bulletin was informative. We would be happy to arrange for any additional information that you may require on the subject. Please write to us at in-fmkpmgccsbulletin@kpmg.com, for any queries or feedback.

Regards,
KPMG in India
