Dear Sir / Madam,

We present to you the eighth edition of our Software Licensing Bulletin, which highlights prominent features of HPE® Software Managed Service Provider Program.

HPE Software Managed Service Provider Program

- The HPE Software Managed Service Provider (MSP) program is designed to provide HPE's partners with multiple options to serve its end-user customers.
- Customer may use eligible software with multi-tenant use and also re-use the licenses for multiple client engagements for the duration of MSP program.
- Customer cannot use the eligible software under MSP program for the internal use such as training, evaluation etc.
- HPE's Named End User Use allows providing services to a single Named End User solely for the benefit of such Named End User and within the scope of the license purchased by participant under the applicable licensing model. Named End user use does not include internal use.
- HPE products under MSP program are eligible to use in providing services to end-user customers located in the specified territory such as eligible products can be installed at sites which are owned by customer or owned by customer's client for which the customer is providing managed services. Customer should have control over such sites and should provide HP the address of the site prior to installation.

We hope the bulletin was informative. We would be happy to arrange for any additional information that you may require on the subject. Please write to us at in-fmkpmgccsbulletin@kpmg.com, for any queries or feedback.

Regards,

KPMG in India
