Dear Sir / Madam,

We present to you the sixty first edition of our Software Licensing Bulletin, which highlights details on Siemens® Product Lifecycle Management software.

As an information management system, Siemens PLM Software can integrate data, processes, business systems and people in an extended enterprise. It also allows an organisation to manage the information of a product throughout its entire lifecycle effectively - i.e., from ideation, design and manufacture through service and disposal.

**Licence types**

- **Backup (or Failsafe) Licence**
  - It is a licence type that may be purchased separately solely to support redundancy on customer's backup or failsafe installations, and this licence may not be used for any other purpose.

- **Floating / Concurrent User Licence**
  - It is a type of licence where access to the software at any given moment will be limited to the maximum number of concurrent Authorized Users for whom licenses have been validly acquired under this Agreement. Anyone on the network can use the licensed module, up to the limit specified in the licence file.

- **Loaner Licence**
  - It is a type of Licence that is granted to the customer at SISW’s (Siemens Product Lifecycle Management Software Inc.) option on a temporary basis as part of SISW’s maintenance obligations, for a period less than or equal to 90 days.

- **Named User Licence**
  - It is licence type where access to the software will be restricted to those individuals within customer’s organisation that are named by customer and for whom licences have been validly acquired under this Agreement. The customer shall have the right to change Named User licenses provided that no individual Named User licence may be changed more than once per calendar month.

- **Node-locked Licence**
  - It is a type of licence where the use of the software will be restricted to a single workstation specified by customer. This licence software is usually accompanied by a hardware lock device or dongle to manage this restriction.

- **Per Product Licence**
  - It is a licence type where the use of the software will be restricted to the number of third party products with respect to which the software is interfaced on a one-to-one basis.

- **Test/QA Licence**
  - It is Licence type that may be purchased solely for the purpose of supporting customer’s need for ongoing installation customisation, support and testing, and may not be used for any other purpose including, without limitation, for use in a production environment.

- **Mixed Licence**
  - It is a Licence type that mixes node-locked and floating licences in the same licence file

We hope the bulletin was informative. We would be happy to arrange for any additional information that you may require on the subject. Please write to us at in-fmkpmgccsbulletin@kpmg.com, for any queries or feedback.

Regards,
