Dear Sir/Madam,

We present to you the eighty-eighth edition of our Software Licensing Bulletin, which highlights the concepts of the Geovia®.

Geovia is a set of geologic modelling and mining engineering software applications.

Geovia portfolios:
- Surpac - Geology and mine planning software
- GEMS - Geology and mine planning software
- Minex - Geology, mine planning and scheduling software for stratified deposits
- MineSched - Scheduling software for mining
- Whittle - Strategic mine planning software
- InSite - Mine production management software
- PCBC - Geology, mine planning and strategic planning software for block caving

Licensing:

Local user: The local user can use it on his/ her machine even without internet connectivity. One licence is required for each instance of a system to which the applicable product is connected.

Below are the requirements for a local user licence.
- Dongle licensed: Where the product comes with a dongle (a hardware item that allows activation on one computer at a time.)
- Licence number/token number: The licence number/token number is assigned by Dassault Systemes and they are configured with hardware details.

Network Server: A licence is requested from a network licence server. A registered user can only use the tokens assigned to them. The customer may add and/or substitute from time to time new registered users as long as the aggregate number of registered users does not exceed at any point in time the number of licences in effect at such time for that particular product and, further if a person who was previously a registered user returns to registered user status, a new licence fee must be paid to Dassault Systemes.

Below are the requirements for the Network server license.
- Dongle licensed: Where the product comes with a dongle (a hardware item that allows activation on only one computer at a time), such product can only be shared using the network server licensing.
- Licence number/token number: The licence number/token number is assigned by Dassault Systemes and they are configured with hardware details.

DS licence manager: - It is a software tool or process used to control and document where and how software products are allowed to run in order to enforce compliance with software licences (also known as an End-User Licence Agreement, or EULA).

We hope the bulletin was informative. We would be happy to provide you additional information that you may require on the subject. Please write to us at in-fmkpmgccsbulletin@kpmg.com, for any queries or feedback.

Regards,

KPMG in India

About KPMG in India’s software licensing team: We have an experienced team of over 100+ professionals in India with diverse and in-depth knowledge of software licence, software asset management tool, Intellectual Property (IP) and contract review.
