Executive summary

There is considerable evidence that the HR profession continues to have a credibility issue and lacks strategic impact. We believe that this is because HR functions are insufficiently differentiated in support of driving value in their businesses. Under pressure to demonstrate their worth they instead pursue ‘best practices’, leading to the building of ‘copycat’ functions that are primarily based on industry, generic good practice and benchmarks. We argue that this is a trap for HR but that it can be avoided as long as HR leaders ‘architect’ the people management structures, practices and processes as drivers and enablers of their businesses strategies.

This paper explores how to avoid this problem and describes what can be done to create a truly differentiated HR function that drives strategic value.

The conventional view serves to protect us from the painful job of thinking

J.K Galbraith
In the last several years, particularly in the Western world with its economic woes, there has been a preoccupation with cost optimization, cost reduction, sustainable cost management ... all things cost. This has required HR to play its part, but this has largely been through making the HR function more cost effective. This is of course a good thing as far as it goes. The problem has been that we see many HR functions that have lost sight of how they can drive value in the wider business. This is significant given that the people agenda in organizations contains some significant issues and challenges.

In a recent KPMG survey* of 3000 business leaders in 31 countries the issues that they were most concerned about included:

- **Business model changes**, including technology impacts and the need for ever greater agility and cross boundary collaboration in order to remain competitive.

- **Exploiting growth opportunities** in a global economy – including emerging markets, challenges to grow in more mature markets and not having the talent in the right place to make the most of opportunities in growth markets.

- **Changing business conditions** to focus more attention on cost efficiencies, capital, and cash.

- **Managing, developing and retaining the right people**; in particular, engaging and motivating employees for maintaining the business when growth opportunities are limited and where career paths have been blocked and disrupted by tactics to secure organizational survival.

All of these issues have a significant bearing on the people agenda in organizations. The issue for HR is to show how it is addressing all of them and delivering value.

The challenges for HR

Dave Ulrich, probably one of the best known HR gurus describes the HR function as one that offers the greatest promise, but consistently under-performs in reality. This has been a consistent theme for the last 20 years: there has been the hopeful rhetoric of the promise of HR Business Partnering, the execution of the ‘Ulrich Model’, driving the response to the ‘War for Talent’ and yet, even though people are supposed to be our greatest asset, we still see HR leaders worrying about their influence, stressed out, not on the senior management team in many companies and unable to be heard with equal attention to that given to the CFO. As one client CEO of a global retailer described it:

“My CFO tells me the financial health of the business and what we need to do to improve things; my SVP of Marketing gives me predictive insights into what our customers are thinking, feeling and what they are likely to buy. My CHRO tells me that he is redesigning the performance management system…again”.

Traditionally, the function, somewhat unsure of its credibility in the boardroom and struggling to prove its value has sought refuge in benchmarks, best practices and the classic ‘Ulrich model’ of centers of excellence, business partners and shared services.

Indeed, the finance function has traveled a similar path; but as Gary Hamel has said, following this path sets a trap for HR. He has noted that “unlike the finance function, HR does not have an explicit and accepted theory about how it adds value to the business.”

The reasons for this are reasonably straight-forward. Non-financial benefits of the sort offered by effective HR functions are very difficult to quantify credibly. We know that the primary driver of value creation from the HR function is a combination of accurate and predictive information, business-driven and business driving strategy, solid service delivery and valuable business partnering – all engineered to be an integral and holistic part of the execution of business strategy. Indeed, the evidence and KPMG’s own research clearly points to the need for HR to be ‘architected’ as a system of performance where processes and practices reinforce each other in support of the dominant value creation themes of the business such as customer service, innovation or lean operations.

We believe that unlike any other functions, HR is based on a situation specific model of added value. By this we mean that it is dependent on the industry, competitive landscape, customers and products. So an HR function in a market leading global technology company must find a role in relation to the value chain that might be quite different from the HR function in a global hotel chain.
The trap, therefore, that HR can fall into is that it behaves as if its model is universally accepted. This causes an obsession with best practices, and the latest initiatives in HR, be it talent management, employee engagement or software as a service.

KPMG firms often see that the leaders of HR are frequently challenged to prove their value and earn their place on the executive table. Talking about this to a senior HR leader at a large global company elicited the response that he felt that his function was being ‘backed into a corner’ where it repeatedly had to demonstrate functional cost reduction. The conversations with the CFO or CEO never strayed into territory concerning HR’s role in growth.

The much talked about and implemented ‘Ulrich model’ of HR functions has helped HR to address the role of service delivery, to recognise the importance of strategic partnering and the potential for technology. These have all helped HR to make a difference. But the Ulrich model has also led to a generic and fairly standardized view of HR: the antithesis of differentiation.

At KPMG, our philosophy is that HR in any organization should find and commit to a specific configuration – the strategy, structure, tools, processes, measures – that directly enables the value chain of the organization in its specific circumstances.

The ability to perceive or think differently is more important than the knowledge gained

David Bohm
What this means for the future HR function

Leaders of the people agenda should, therefore, strive to break-out of the thinking that says there is a universal model for HR that delivers value in all situations, rather like the ‘any time, any place, anywhere’ mantra. Instead businesses should be aiming to create an HR Architecture that is unique for each organization and ‘fit for purpose’. So, how can they do this?

The first step is to define the key people issues in the context of the challenges facing an organization. One way of doing this is to consider the Value disciplines, developed by Treacy & Wiersema: Operational Excellence, Product Leadership and Customer Intimacy. KPMG firms believe these disciplines provide a clear framework through which key people issues and the overall people agenda can be developed.

When KPMG firms look to help clients develop their HR Function, we ask three important questions:

1. **What is the business strategy?**

   This includes asking who are their customers? Who are the other key stakeholders? What are the ways in which the company can differentiate itself and achieve competitive advantage? What are the organization’s critical success factors for achieving the strategy? What are the required core competences?

2. **How is value created through people and what does the people agenda need to look like?**

   This draws a clear distinction from the HR Function Strategy and Architecture and instead looks at the wider people issues and requirements, regardless of function. The important thing to do here is to translate the strategic critical success factors and competence requirements into people requirements based on an understanding of how people can bring differentiated value. These will include: What are the key roles in the value chain? What is the required culture and behaviors? What are the key people competences and skills? Where are important judgments made in the value chain and by whom? How can people drive performance, time or cost measures?

“It is critical to differentiate and have a distinction about the people agenda in the business, from the HR Strategy. The people agenda is the bridge between the business strategy and the HR Strategy and has all the clues about where the priorities are.”

Group HR Director, Global Oil Major
3. How can HR drive and enable this value?

This is where we look to configure the HR Architecture to drive specific value for the business. So, for example, if the dominant business strategy is based on product leadership, then we configure structures, processes, activities and measures to drive and reinforce the need for innovation.

Through this thoughtful process, our firms’ professionals look to create Powerful Connections. This is where HR activities, processes and deliverables are mutually reinforcing creating a total system of performance. For example, a set of people management processes and systems that enables and drives innovation would look at whether cross functional team performance was critical to innovation, how team performance management, team reward and even team talent management might be configured to create a reinforcing and enabling dynamic in the business that drives innovation. We would also look to understand which were the critical roles in the innovation value chain and understand how HR could manage these roles more effectively.

If the dominant value discipline was operational excellence or customer intimacy, or indeed some form of unique combination of the two, then the route to differentiating the HR function would be different. The key quality is differentiation and uniqueness, not reported best practice.

The real difficulty...lies not in developing new ideas but in escaping from the old ones

John Maynard Keynes
Conversation doesn’t just reshuffle the cards: it creates new cards

Theodore Zeldin
A new approach to differentiation of your HR function and architecture

It’s not just a case of asking the three questions above. There is a framework and approach that KPMG firms use to understand the implications of those questions (and others), in a disciplined and searching way. This approach enables us to translate the business strategy into value through the people agenda, and in turn, identify the ways in which HR can add value to the people agenda. This is how KPMG professionals can identify the right HR configuration for each unique organization.

The diagram below provides an overview of the approach.
What does a differentiated HR architecture look like?

Based on our firms’ experience in applying this methodology, the table below details how HR activities can be differentiated in pursuit of value, based upon the three strategic value disciplines:

This table shows an idealized view of differentiation based on the Value Disciplines framework of Treacy and Wiersema. This is not an argument for the replacement of one generic ‘Ulrich model’ with three new templates, as this would fall into the same trap we believe is a key problem for HR. Instead, we are advocating a uniquely configured approach that properly represents the specific attributes of each organization’s business strategy.

For example, one of our firms’ clients, a global telecommunications company, required a strong emphasis on Customer Intimacy. However, in addition, Operational Excellence was also seen as an important component of its business strategy. This led to the configuration of a People Services Center that delivered a high level of customer service to employees for lifecycle processes to the extent that it was a role model for the kind of telephone based support that employees were expected to give to real customers. The People Services Center also has a centralized function of ‘level 2 case worker’ capability located in each country of operation. This provided the optimum balance and trade-off between cost efficiency and excellence of service delivery.

It’s not what the vision is, it’s what the vision does

Peter Senge
Business Strategic Value Proposition

**Operational Excellence**
- Deploy lean processes
- Improve cost to serve
- Deliver consistency and quality

**Examples:**
Toyota, GE, McDonalds, Zappos

**Customer Intimacy**
- Customer insight leads to targeted services and products
- Segmented service offerings requires flexible and differentiated channels of delivery

**Examples:**
Ritz Carlton, Virgin Atlantic

**Product Leadership**
- Innovation, collaboration and high performing teams across the business
- Extensive customer and consumer engagement
- Competitive advantage from ideas/innovation and from execution of new products and services

**Examples:**
Apple, Google, BMW

**People Agenda**

- Individuals and teams deliver continuous improvement
- A culture of ‘right first time’
- Competences enable consistent quality of product and service
- Individuals and teams deliver continuous improvement
- A culture of ‘right first time’
- Competences enable consistent quality of product and service
- Engaged employees deliver better service
- Employees encouraged to deliver discretionary effort to build rapport and deliver timely problem solving for customers
- Engaged employees deliver better service
- Employees encouraged to deliver discretionary effort to build rapport and deliver timely problem solving for customers

**HR Architecture Implications**

- HR centers of excellence and business partners focus on learning and development and performance management
- HR service delivery role models efficiency and effectiveness
- Talent management focused on key roles in value chain that drive operational excellence and continuous improvement
- Extensive process and outcome measurement in place
- COE and business partners focus on improving employee engagement and experience
- Culture of service through reward and recognition
- HR service delivery role models the kind of service ‘real’ customers can expect from the organization
- Talent management focused on customer facing roles and roles that shape the customer experience
- Culture of innovation through enablement of team performance management, collaboration and employee connection to customers and strategy
- HR processes create powerful connections between team performance management, team reward and line of sight to the business strategy through communication and profit share
- Talent management focuses on entrepreneurs and key roles that ensure execution of new ideas and products.
- Talent management focuses on teams as well as individuals
In our member firms’ experience, and based on the application of this approach, creating an architecture for highly impactful and differentiated HR will require the following:

A differentiated HR operating model:
Clearly, shared services, business partnering and centers of expertise are all possible components of an HR function; it is the way in which these components are configured that provides the opportunity for differentiation. For example, another client found that significant opportunities occurred when they reframed centers of expertise from being activity based [such as talent management, reward, learning and development] to being multi-disciplinary and outcome based. This led to Centers of Excellence for achieving employer of choice, profit per employee improvement and building lean capability.

Powerfully connected processes:
We call this the 2+2=5 factor. For example, if team performance is fundamental to the operation of the business, such as in a fast food retailer with hundreds of outlets each employing 5 – 10 people, then team performance management processes linked to team reward and recognition and team based learning and development could come together to create a powerful reinforcing system of performance. The opposite, Deadly Combinations, are where the organization relies on team performance for the business, but key processes encourage individual performance management and reward. This would be a case of 2+2=3!

Talent management of key roles:
Key roles are those that either have significant financial, product or customer impact and could be at any level in an organization. Their relative importance depends on the decision making impact that they have and the downstream consequences of those decisions either when considered as individuals or from the collective impact. For one upscale hotel chain that our firms work with, this means that focus on talent management needed to broaden from solely being about hotel general managers to include hotel front desk staff, who had a huge influence on brand perception and repeat business. Another role that had been ignored in terms of talent management spend but was vital to success was a small group of people that sought out new locations for hotels.

Focusing talent management spend on these roles has delivered a measurable and significant boost to value creation through the differentiated approaches adopted by the HR function.

Taken together, these components of HR Architecture can have a direct impact on organization culture, core competence and profit per employee. They have a direct bearing on the people agenda and when configured to drive value this leads to the HR function being integral to business strategy execution.
Conclusion

KPMG has developed a set of tools and workshops which are designed to enable organizations to identify and deliver differentiated HR strategy and services that close the gap between theory and practice to achieve competitive advantage for individual businesses.

It is our view that any company claiming people are its most important asset should look to build a strategically differentiated HR function – one that contributes to the execution of strategy and value creation as much as it is aligned to and responsive to it; one which has the vision, capabilities and influence to make the very most of that vital asset.

Vision without action is a daydream. Action without vision is a nightmare
