

Cyber Education

# Cyber Range-IT

Cyber Serenity is  
knowing you are  
trained and ready

## Learn cyber skills without learning the hard way

The KPMG Cyber Range-IT gives your organization the chance to learn how to take on cyber-attacks, without actually being attacked. This training range provides ultra-realistic hands-on learning, virtually replicating your IT environment so that your team can effectively drill their skills until mastery.

Fast, flexible and easily scalable, it is a legally-safe and cost-effective way to ensure you get hands-on experience in managing cyber-attacks.

- 1 Real scenarios based on attacks handled by KPMG**

KPMG's Cyber Range-IT features pre-built scenarios that replicate real incidents, and can initialize multiple simulation environments in a matter of minutes. The result: you get firsthand experience of the ups and downs of taking on cyber-attacks with simulations based on actual KPMG field work, stand to gain insights into how secure your own cyber defense mechanisms are, and get to make all the necessary fine tuning to your system before any actual attack.
- 2 Get trained by practitioners with civil and military enforcement experience**

Our trainers are real-world incident responders and penetration-testers, each with their own track record of dealing with actual cyber-attacks. Learn from their battle scars and leverage their experience to build your own portfolio of cyber defense strategies.
- 3 Create 'digital twins' of your organization's network in seconds**

Clone your corporate network, simulate Internet-level connections and traffic, and then apply KPMG's enterprise simulation environments for ultra-realistic training on how to protect your system. Test and train to failure, tweak and repeat, up until you perfect your strategies and attain mastery.
